UNIVERSITY_NON_INTERFERENCE — EP-AGENT-001

UNIVERSITY NON-INTERFERENCE — EP-AGENT-001

Source: Master University Non-Interference + Prior-Work Audit, 2026-10-15 (`/home/ubuntu/RF_University_NonInterference_Audit.md`, Section I and Section J) **Version:** v0.3.5-DRAFT (2026-10-16). Version history: §2 HISTORICAL / SUPERSEDED and `CHANGELOG.md`.

```
DESIGN:                         COMPLETE
EXECUTIONPROOF PIN:             PASS
Q9:                             PASSED
Q8 TECHNICAL FREEZE READINESS: PASS
Q8 FORMAL:                      OPEN — REQUIRES DEREK APPROVAL + PREREGISTRATION FILING
PREREGISTRATION:                NOT FILED
EXPERIMENT:                     NOT EXECUTED
RESULTS:                        NONE
EXECUTION:                      NOT AUTHORIZED
```

---

1. Active university projects and audit verdicts

Project	Lane	Audit status
University of Dayton — ExecutionProof Adversarial Boundary Challenge (CPS 474/574 Team A, Fall 2026)	Adversarial: bypass, replay, action drift / post-verification mutation, forged/stale/reused/inadequate evidence, revoked/invalid authority, malformed requests, ProofRecord integrity, HOLD/DENY containment, downstream-effect testing, false-ALLOW	**YELLOW**
University of Washington P1 — Adversarial Execution Boundary Testing	Adversarial / boundary challenge	**YELLOW**
University of Washington P2 — Multi-Agent Authorization	Authority, delegation, role relationships, agent-to-agent requests	**YELLOW**
University of Washington P4 — Independent Reproducibility & Conformance	Independent reproduction, external conformance	**LIGHT GREEN**

P1, P2, and P4 are treated as three distinct projects.

2. EP-AGENT-001 verdict

```
DESIGN-SCOPE VERDICT:          GO WITH BOUNDARY
CURRENT EXECUTION ELIGIBILITY: NOT YET ELIGIBLE
NEW-RESEARCH GATE:             PENDING Q8 FORMAL
  Q8 TECHNICAL FREEZE READINESS: PASS
  Q8 FORMAL STATUS: OPEN — REQUIRES DEREK APPROVAL + PREREGISTRATION FILING
  Q9: PASSED — UNIVERSITY_EXPOSURE_LOG.md §5b
```

"GO WITH BOUNDARY" is a design-scope verdict only. Execution additionally requires (1) a filed preregistration lock embedding this boundary, (2) Q8 and Q9 PASSED, and (3) Derek Hone's explicit written execution authorization. Nothing in this document authorizes execution.

v1 interaction pattern: one agent → one proposed consequential action → ExecutionProof `/verify` → simulated downstream boundary. Exactly one tool call per run; no second agent; no single-agent parallel tool calls.

HISTORICAL / SUPERSEDED (§2)

Retained in chronological order (Rule 11). None of this is current status; the block at the top of §2 is operative.

v0.2 (2026-10-15) — superseded: study status "PREREGISTRATION DRAFT COMPLETE — HOLD FOR Q9 RECONCILIATION".

```
DESIGN-SCOPE VERDICT:          GO WITH BOUNDARY
CURRENT EXECUTION ELIGIBILITY: NOT YET ELIGIBLE
NEW-RESEARCH GATE:             PENDING Q8 + Q9
  Q8: Preregistration/freeze integrity not yet complete.
  Q9: University exposure log not yet reconciled.
```

v0.3.1 update (2026-10-16): Q9 **PASSED** — `UNIVERSITY_EXPOSURE_LOG.md` §5b. New-research gate now pending Q8 only.

v0.3.3 update (2026-10-16): Q8 TECHNICAL FREEZE READINESS **PASS** (checklist item 7 PASS — ExecutionProof Controlled Reference Verifier pinned at `v0.1.2-reference` @ `b03365d5`; see `EXECUTIONPROOF_PIN.md`). Q8 FORMAL STATUS remains **OPEN UNTIL DEREK APPROVAL + PREREGISTRATION FILING**. Gate at v0.3.3:

```
DESIGN-SCOPE VERDICT:          GO WITH BOUNDARY
CURRENT EXECUTION ELIGIBILITY: NOT YET ELIGIBLE
NEW-RESEARCH GATE:             PENDING Q8 FORMAL
  Q8 TECHNICAL FREEZE READINESS: PASS (v0.3.3)
  Q8 FORMAL STATUS: OPEN UNTIL DEREK APPROVAL + PREREGISTRATION FILING
  Q9: PASSED (v0.3.1)
```

3. SAFE (permitted)

1. Framework adapters — single-agent tool-call path only
2. Request Contract normalization — benign, well-formed inputs **only**
3. `/verify` integration — functional correctness of the call path
4. ProofRecord reference return — the single agent's tool result carries the reference; linkage/storage only; no tamper/forgery
5. Adapter LOC
6. Setup burden
7. Latency — internal adapter overhead; labelled "RF internal measurement"
8. Framework portability — same contract across frameworks, single-agent
9. Dependency burden
10. Integration friction

4. MODIFY (permitted only under stated conditions)

1. **ALLOW/HOLD/DENY return to the framework** — HOLD/DENY triggered only by benign, policy-driven fixtures (required contract field not supplied, role not granted, required evidence not supplied, amount over limit). Each fixture differs from B1 by exactly one condition. Never by

attack-derived inputs (stale, forged, replayed, revoked). Measures that the decision reaches the framework correctly — not whether containment resists attack.
2. **Core-decision invariance** — only on the fixed set of five benign normalized contracts (B1–B5), identical across frameworks. Invariance under mutated, replayed, stale, or out-of-adapter inputs is UNIVERSITY-RESERVED.

5. UNIVERSITY-RESERVED (excluded — never implemented in EP-AGENT-001)

#	Excluded item	Reserved for
1	Agent-to-agent delegation / handoff	UW P2
2	Multi-agent authority / multi-hop delegation	UW P2
3	Collusion / confused deputy	UW P2
3a	Shared authority / inherited permissions / authority propagation between agents	UW P2
3b	Parallel agents / multi-agent chains / orchestration	UW P2
4	Bypassing the adapter / direct unauthorized tool invocation	UD / UW P1
5	Replay through adapters	UD / UW P1
6	Mutation through adapters	UD / UW P1
7	Adversarial malformed input	UD / UW P1
8	ProofRecord tamper / forgery	UD
9	Independent reproduction claims	UW P4
10	External conformance claims	UW P4

Implied exclusions derived from the UD lane and applied here as well: forged / stale / reused / inadequate evidence; revoked or invalid authority; post-verification action drift; downstream-effect resistance testing; false-ALLOW hunting.

v1 scope rule (not a reservation, a simplification that keeps the study clearly outside UW P2): single-agent parallel tool calls are excluded; exactly one tool call per run.

6. New-research gate (10 questions) applied to EP-AGENT-001

#	Question	Answer for EP-AGENT-001
Q1	Does the study's primary RQ match a reserved university RQ?	**NO.** EP-AGENT-001's RQ is framework portability, not adversarial evaluation (UD/P1), not multi-agent authorization (P2), not independent reproduction (P4).
Q2	Same SUT, same boundary, same threat model?	SUT is the same (ExecutionProof). Boundary is the same. But the threat model is **DIFFERENT** — EP-AGENT-001 uses benign policy-driven fixtures only, not adversarial. Not all three match → condition not met → **NO.**
Q3	Would results function as an answer key for an active team?	**NO.** Benign portability results do not answer adversarial (UD/P1), multi-agent (P2), or reproduction (P4) questions.
Q4	Adversarial, bypass, replay, mutation, tamper, false-ALLOW?	**NO.** Explicitly excluded.
Q5	More than one agent holding/ delegating/exercising authority?	**NO.** Single-agent paths only; delegation excluded.
Q6	Claims using "independent", "external", "reproduced by", "conformant"?	**NO.** Claim ceiling prohibits these.
Q7		

#	Question	Answer for EP-AGENT-001
	Reserved elements removable while preserving a meaningful RF question?	**YES.** Reserved sub-variants are removed from each test case by boundary definition.
Q8	Preregistered with SHA lock, exclusions, claim boundary?	**Q8 TECHNICAL FREEZE READINESS: PASS (v0.3.3)** — checklist item 7 PASS (reference verifier pinned `v0.1.2-reference` @ `b03365d5`); items 1–6, 8–11 PASS. (History: §6 note below.) **Q8 FORMAL STATUS: OPEN UNTIL DEREK APPROVAL + PREREGISTRATION FILING.**
Q9	Would EP-AGENT-001 execution or student-facing material interfere with an active university project (exposure log checked)?	**PASSED (v0.3.1)** — written-record Gmail search + Derek Hone written confirmation; `UNIVERSITY_EXPOSURE_LOG.md` §5b. (History: §6 note below.)
Q10	Safety/security necessity overriding wait?	**NO.**

Gate result: DESIGN-SCOPE VERDICT **GO WITH BOUNDARY** (Q1–Q6 NO; Q7 YES; Q10 NO). CURRENT EXECUTION ELIGIBILITY **NOT YET ELIGIBLE**. NEW-RESEARCH GATE **PENDING Q8 FORMAL**.

HISTORICAL / SUPERSEDED (§6), chronological: v0.2 — Q8: v0.2 draft and PRE-FILING CANDIDATE LOCK exist; final lock requires Derek Hone's written approval and filing. Q9: EP-AGENT-001-specific exposure none recorded in RF records available to this audit; UD kickoff/brief contents UNKNOWN — TO RECONCILE; older ARK/P01 exposure is governed by the Master Audit and does not by itself fail Q9; UW teams not yet assigned; see `UNIVERSITY_EXPOSURE_LOG.md`. Gate: PENDING Q8 + Q9. v0.3 — Q8 technical freeze readiness FAIL (checklist item 7 BLOCKED — ExecutionProof implementation commit not confirmable). Q9 OPEN — records reconciled as far as available (`UNIVERSITY_EXPOSURE_LOG.md` §5a); A, B, D, E: no exposure recorded; C undetermined; two Derek confirmations remain. v0.3.1 — Q9 PASSED. v0.3.3 — Q8 technical freeze readiness PASS (item 7 PASS).

7. Applicable permanent rules (from audit Section J)

- Rule 1 (reserved-question), Rule 2 (prior work is not interference), Rule 3 (no answer keys pre-plan), Rule 7 (independence language), Rule 10 (audit refresh trigger), Rule 11 (records immutability), Rule 12 (gate-before-execute), Rule 13 (exposure log), Rule 14 (completion release).
- Per Rule 10, this gate is re-run at preregistration freeze and whenever a UD or UW primary brief becomes available.
- Per Rule 3, EP-AGENT-001 results (once they exist) are not shared with any university team before that team freezes its own plan, and any sharing is logged per Rule 13.

8. Commitment

Remnant Fieldworks commits that EP-AGENT-001 will:

1. Execute only the SAFE and MODIFY cases listed above, under their stated conditions.
2. Execute no UNIVERSITY-RESERVED item, in any adapter, fixture, script, or ad-hoc run.
3. Make no claim of adversarial robustness, multi-agent authorization, independent reproduction, or external conformance.
4. Never describe RF's own work as "independent validation" or any university as "a validator".
5. Log every university-facing exposure of this packet or its results in `UNIVERSITY_EXPOSURE_LOG.md`.
6. Re-run the gate before execution and on any change to university project scope.
7. Assign no University of Dayton or University of Washington student, team, or faculty member any EP-AGENT-001 role — not consultant, co-investigator, participant, reviewer, or executor.
8. Share no EP-AGENT-001 fixtures, expected outcomes, answer keys, or results with any university team while its reserved project is active.

"University Non-Interference Boundary: This study is intentionally limited to framework portability, request normalization, verification-interface integration, decision propagation, ProofRecord linkage, and engineering integration characteristics. It does not test or resolve active University of Dayton or University of Washington adversarial, multi-agent authorization, or independent reproducibility research questions."
